

## Tigrinya

No romanization system for Tigrinya has been approved at the United Nations conferences on the standardization of geographical names. No information has been received on whether there exist any national systems of romanization in Eritrea.

Tigrinya, like Amharic, uses the Ethiopic syllabic script whereby each syllable denotes a combination of a consonant and a vowel. It has 35 basic characters, each character having several different forms, usually called orders, according to the vowel with which the basic symbol is combined.

<sup>A</sup> The sixth-order characters should be romanized either with or without the letter *ĩ*, depending on pronunciation.

<sup>B</sup> Forms of the consonant character *w* are understood to be becoming obsolete in Tigrinya.

<sup>C</sup> The vowel characters in row 17 should be romanized with the apostrophe unless appearing as a word-initial. Forms of the character *h* are understood to be falling into disuse in Tigrinya.

**Note**

Where consonant character sequences give rise to the romanizations *k-h*, *n-y*, *z-h* and *s-h*, a hyphen may be added between them to differentiate those romanizations from the digraphs *kh*, *ny*, *zh* and *sh*.
